SUMMARY

Product designer and front-end engineer with 5+ years shipping data-dense enterprise software across healthcare, ERP, AI, and payroll. I work at the hard end of B2B UX — approval chains, reporting screens, and admin tooling where density has to coexist with clarity. I design in Figma and build in Angular and TypeScript, so my specs survive contact with engineering. Recent work spans a full design system, a WCAG-compliant dark mode architecture, and AI-assisted product surfaces.

CORE SKILLS

Design: Product Design, UX Strategy, UI Design, Interaction Design, Design Systems, Wireframing, Prototyping, Information Architecture, User Research, Usability Testing, Accessibility (WCAG 2.1 AA), Responsive & Mobile-First Design, Dark Mode Theming

Engineering: Angular, TypeScript, JavaScript, React, HTML5, CSS3, SCSS, NgRx, Angular Reactive Forms, PrimeNG, Angular Material, SQL, REST APIs, Git

Tools: Figma, Figma Plugin API, Adobe XD, Framer, Webflow, Adobe Creative Suite, Jira, Confluence, Agile / Scrum

Domains: Enterprise SaaS, HCM & Payroll, ERP, Healthcare & EMR, Conversational AI, IoT

PROFESSIONAL EXPERIENCE

Product Designer · Oak Street Technologies

Oct 2025 – Present

Enwage — enterprise HCM & payroll platform · Islamabad, Pakistan

- Own end-to-end UX for core payroll and HR modules — dashboards, approval workflows, bulk-edit tooling, and regulatory reporting — from discovery through Angular implementation.
- Established the Enwage design system on a “density with clarity” principle: an 8px grid, a 13px type scale, IBM Plex Sans/Mono pairing, and a semantic token layer now adopted across the product.
- Delivered a complete dark-mode conversion for reporting and dashboard surfaces using scripted token mirroring and WCAG-compliant variable collections, cutting manual re-theming effort to near zero.
- Redesigned the Access Override workflow in the client-user provisioning flow, replacing an ambiguous permission step with a progress-badged modal and an explicit active-override state.
- Restructured multi-page PDF payroll reports with a bifurcation model — identity fields into hierarchical headers, transactional fields into grid columns — materially reducing column count without losing data.
- Designed and prototyped the “Ask Eva” in-product AI assistant, solving table-compression issues with an overlay drawer pattern instead of a layout-shifting side panel.
- Build production-grade Angular/TypeScript prototypes so stakeholders validate real behaviour rather than static mockups, shortening design-to-dev handoff cycles.
- Automate repetitive design production via the Figma Plugin API — recursive theming scripts, variant generation, and cross-file token sync.

Lead Designer · CloudFruit · HiiBo

Nov 2023 – Jul 2025

ERP and conversational AI products · Remote (US)

- Built and managed the oneXerp ERP design system in Figma, supporting 5,000+ users and reducing onboarding friction by 40%.
- Led design for an AI-driven chatbot platform, translating complex AI workflows into clear, low-friction user experiences across onboarding, conversation UI, and configuration.
- Set visual and UX direction as sole design lead, working directly with founders to turn loose product concepts into scoped, buildable flows.

UI/UX Engineer · Stella Technology (SMC Pvt. Ltd.)

Feb 2022 – Oct 2025

Digital healthcare & EMR products · Islamabad, Pakistan

- Designed healthcare dashboards that improved accessibility compliance by 30% and raised usability scores by 25%.
- Partnered with product managers, engineers, and QA to align UX strategy with product goals across the delivery cycle.
- Produced wireframes, interactive prototypes, and research-driven interfaces, translating complex clinical data models into usable screens.

UI/UX Designer · Starsys Solutions · Ingenious Digital Systems

2016 – 2021

Web, mobile, and agency client work · Karachi, Pakistan

- Delivered web and mobile interfaces across client projects, building the front-end engineering foundation that now underpins my design practice.

EDUCATION

B.Sc. Computer Science · Karachi Institute of Economics & Technology (KIET)

2021

CERTIFICATIONS

Google UX Design Certificate: Foundations of User Experience Design — credential AZ98C8M8GY57

Business Communication: MaxFoster Global

AWARDS & RECOGNITION

- Employee of the Month (2022) and Best Performer, Design Department — Stella Technology.
- Winner, KIET Combat UI/UX Design Competition (2018–2019); Winner, KIET Flair (2017); Runner-up, NED ITEC (2017).
